

TerraStreamer®

TERRASTAT

Science and experience show that TerraStat Charge Dissipation Terminals, and the structures on which they are installed, are much less likely to sustain a direct lightning strike than unprotected structures or structures with traditional lightning protection systems

TERRASTREAMER

The TerraStreamer ESE terminal initiates the upward connecting streamer earlier in time than a traditional lightning air terminal, thus extending the effective range of protection over and above that of conventional lightning air terminals. By utilizing this advanced technology, TerraStreamer ESEs provide lightning protection to facilities that would otherwise be difficult or cost prohibitive to protect by conventional means
